<b>December</b>	on the 22nd at 0 Cancer 49 at 12:49pm <b>FULL COLD MOON</b>	on the 7th at 15 Sagittarius 07 at 2:20am

**NEXT BLUE MOON:** The expression “**Once in a Blue Moon**” refers to a month in which **Two Full Moons** occur and happens only every few years. The next **Blue Moon** will occur on January 31, 2018!

**Harvest Moon** A Harvest Moon is no ordinary Full Moon; it behaves in a special way. Throughout the year the Moon generally rises about 50 minutes later each day. Near the autumn equinox the day-to-day difference in the local time of moonrise is only 30 minutes. That comes in handy for northern farmers who are working long days to harvest their crops before autumn. The extra dose of lighting afforded by the Full Moon is what gives the Harvest Moon its name.
